

PRACTICAL-1

Aim: To design prompts for a customer support chatbot scenario using formal, technical and creative tones and compare responses.

Description: This practical introduces prompt engineering by creating prompts in different tones for customer support chatbot applications. The generated responses are analyzed based on clarity, relevance, creativity, and user satisfaction.

Steps:

1. Open a Generative AI tool.
2. Design formal, technical and creative prompts.
3. Generate responses for each prompt.
4. Compare the outputs.
5. Analyze the effectiveness of each tone.

Code:

1. Formal Tone Prompt

Prompt

"You are a professional customer support representative. Respond politely and formally to a customer whose order has not arrived by the expected delivery date. Apologize for the inconvenience, explain possible reasons for the delay, and provide steps for tracking the order."

Sample Response

Dear Customer,

We sincerely apologize for the delay in the delivery of your order. We understand the inconvenience this may cause.

Delivery delays can occur due to factors such as logistics disruptions, weather conditions, or increased shipping volumes. We recommend checking the shipment status using the tracking number provided in your order confirmation email.

EDUCATION TO INNOVATION

If the tracking information has not been updated within the next 24 hours, please contact our support team with your order number, and we will investigate the matter promptly.

Thank you for your patience and understanding.

2. Technical Tone Prompt

Prompt

"Act as an automated customer support system. Provide a technical explanation for a delayed shipment, include troubleshooting steps for tracking the order, and suggest escalation procedures if tracking data is unavailable."

Sample Response

Order delivery delays may result from carrier network congestion, routing exceptions, customs processing, or synchronization issues between logistics databases.

Troubleshooting Steps:

1. Verify the tracking ID in your order confirmation.
2. Access the carrier tracking portal and enter the tracking number.
3. Check for status messages such as 'In Transit', 'Exception', or 'Pending Update'.
4. Clear browser cache or use an alternative device if tracking information does not load.

Escalation Procedure:

- If no tracking updates are available for more than 48 hours, submit a support ticket.
- Provide the order number, tracking ID, and delivery address.
- The logistics team will perform a carrier-side investigation.

3. Creative Tone Prompt

Prompt

"Respond as a friendly and engaging customer support chatbot. Use creative language to reassure a customer whose package has not yet arrived while still providing useful tracking instructions."

Sample Response

Hello!

It looks like your package is taking the scenic route on its journey to you. We know waiting can be frustrating, and we're sorry for the delay.

Your parcel may have encountered a busy shipping hub or a temporary travel detour. To check where it is right now, use your tracking number on the carrier's website and follow its adventure in real time.

If your package seems to have stopped moving for more than a day or two, let us know and we'll put on our detective hats and investigate right away!

Thanks for your patience—we'll do our best to reunite you with your package soon.

OUTPUT:

Comparison of Responses

Aspect	Formal Tone	Technical Tone	Creative Tone
Language Style	Professional and respectful	Precise and system-oriented	Friendly and engaging
Focus	Customer satisfaction	Problem diagnosis and procedures	Reassurance and positive experience
Vocabulary	Polite business language	Technical terminology	Conversational and imaginative
Best Use Case	Corporate support environments	IT and logistics support systems	Consumer-facing chatbots and e-commerce
Customer Experience	Trustworthy and official	Informative and detailed	Warm and memorable

Conclusion

- **Formal tone** is ideal for professional business communication.
- **Technical tone** provides detailed, process-oriented assistance.
- **Creative tone** improves engagement and customer satisfaction while maintaining helpfulness.

Using different prompt styles allows chatbot designers to tailor customer interactions based on audience expectations and business objectives.
