

PRACTICAL-8

Aim: To analyze the effect of temperature variation in generating creative ad copies for digital marketing campaigns.

Description: This practical demonstrates how temperature settings affect creativity, diversity and consistency of AI-generated ad copies.

Steps:

1. Open a Generative AI tool.
2. Set a low temperature value.
3. Generate ad copies.
4. Increase temperature and regenerate outputs.
5. Compare creativity and consistency.

Code:

Prompt 1 (Temperature: 0.2 (Low))

Temperature: 0.2

Write a short advertisement for a new organic coffee brand.

Output 1

Start your day with Fresh Brew Organic Coffee.

Made from 100% organic coffee beans, Fresh Brew offers a rich aroma, smooth taste, and natural freshness in every cup.

Choose Fresh Brew for a healthier coffee experience.

Prompt 2 (Temperature: 0.9 (High))

Temperature: 0.9

Write a short advertisement for a new organic coffee brand.

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Output 2

Wake up to the magic of nature!

Experience Fresh Brew Organic Coffee—where every sip tells a story of mountain-grown beans, rich aroma, and unforgettable flavour.

Fuel your dreams, energize your mornings, and let every cup inspire your next adventure.

Fresh Brew Organic Coffee – Brew Happiness Naturally!

OUTPUT:

Comparison of Outputs

Feature	Low Temperature (0.2)	High Temperature (0.9)
Creativity	Low	High
Consistency	High	Moderate
Predictability	High	Low
Writing Style	Formal	Creative & Engaging
Marketing Appeal	Good	Excellent
Variation	Minimal	High

Conclusion

This practical demonstrated the concept of **token sensitivity** in Generative AI. Even minor changes in the input prompt resulted in noticeable improvements in the generated resume headlines. By adding specific skills, context, and career objectives, the AI produced more professional, accurate, and ATS-friendly outputs. Therefore, carefully designing prompts is essential for obtaining high-quality AI-generated content.
